

## COS440 – Observed Timings

Nicholas Pease

Chunk Size	Observed File Transfer Timing
2048	0.790 seconds
4096	0.555 seconds
8192	0.398 seconds

I found that as the size of the file transmitted increased, the client was able to completely receive the server file faster than with a smaller chunk size. Granted, this was expected on the internal loopback network, as there would be no caps on bandwidth where a smaller chunk size would result in faster transmissions.
